

## Drag a Copy

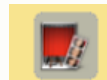

1. Put a graphic on your flipchart page. This is something that you might need several copies of. For example, on a weather calendar you might want to have a sun for the students to drop on sunny days.
2. Right click (control click) on the graphic. Select drag a copy.
3. Now click on your graphic and drag it. Voila!

## Drag and Drop

Drag & drop icons onto your pages so you won't have to go into the tool bar. This just puts the tools right where you need them - more convenient!

1. In the action browser, choose drag and drop.
2. These are actions that can be put on your pages. For example, the reset button. If you or your students write on a page you don't want to save the page with their changes on it. Add a reset button to the page and then reset the page.
3. You'll see the tools that are available here. Drag the tools that are needed for each page of your flipchart.

## Drag an Application

There are times you might want one of your computer applications to be at your fingertips within ActivInspire. For example, if you're working with student photos you might want Photo Booth on your flipchart page so you can take pictures of your students and drag them right on to your page.

1. Open a flipchart.
2. Open your applications folder.
3. Choose Photo Booth. Drag the icon onto the flipchart page.
